1. Product Name
QUIKRETE® Concrete Mix #1101

2. Manufacturer
The QUIKRETE Companies
One Securities Centre
3490 Piedmont Rd., NE, Suite 1300
Atlanta, GA 30305
(404) 634-9100
Fax: (404) 842-1424
www.quikrete.com

3. Product Description
BASIC USE
For pouring concrete 2” (51 mm) thick or more
and building or repairing anything out of con-
crete, including:
- Foundation walls and footings
- Sidewalks, curbs, steps, ramps and walk-
ways
- Appliance and equipment platforms
- Pipe and post footings
- Floors, fish pools, stepping stones
- Splashblocks and bird baths
- Riprap & slope protection
- Driveway repairs

COMPOSITION & MATERIALS
QUIKRETE Concrete Mix consists of a uniformly
blended, properly proportioned mixture of
stone, gravel, sand, Portland cement and other
ingredients approved for use in concrete.

SIZES
- 40 lb (18.1 kg) bags
- 60 lb (27.2 kg) bags
- 80 lb (36.2 kg) bags

YIELD
- An 80 lb (36.3 kg) bag yields approximately
  0.60 cu ft (17 L)
- A 60 lb (27.2 kg) bag yields approximately
  0.45 cu ft (12.7 L)
- A 40 lb (18.1 kg) bag yields approximately
  0.30 cu ft (8.5 L)

4. Technical Data
APPLICABLE STANDARDS
ASTM International - ASTM C387 Standard Spe-
cifications for Packaged, Dry, Combined
Materials for Mortar and Concrete

PHYSICAL/CHEMICAL PROPERTIES
QUIKRETE Concrete Mix exceeds the compres-
sive strength requirements of ASTM C387, as
shown in Table 1.

5. Installation
PREPARATORY WORK
Stake out the planned area and remove sod
or soil to the desired depth. Nail and stake
forms securely in place. Tamp and compact
the subbase until firm.

MACHINE MIXING INSTRUCTIONS
QUIKRETE Concrete Mix can be mixed in a barrel-
type concrete mixer or a mortar mixer.
- Choose the mixer size most appropriate for
  the size of the job to be done
- Allow at least 1 cu ft (28 L) of mixer capac-
ty for each 80 lb (36.3 kg) bag of QUIKRETE
Concrete Mix to be mixed at one time
- For each 80 lb (36.3 kg) bag of QUIKRETE
Concrete Mix to be mixed, add approxi-
mately 6 pt (2.8 L) of fresh water to the mixer
- Turn on the mixer and begin adding the
  concrete to the mixer
- If the material becomes too difficult to mix,
  add additional water until a workable mix is
  obtained
- If a slump cone is available, adjust water to
  achieve a 2” - 3” (51 - 76 mm) slump

Note - Final water content should be approxi-
mately 6 - 9 pt (2.8 - 4.3 L) of water per 80 lb
(36.3 kg) bag of concrete. For other bag sizes,
use Table 2 to determine water content.

HAND MIXING INSTRUCTIONS
- Empty concrete bags into a suitable mixing
  container
- For each 80 lb (36.3 kg) bag of mix, add
  approximately 6 pt (2.8 L) of clean water
- Work the mix with a shovel, rake or hoe and
  add water as needed until a stiff, moldable
  consistency is achieved
- Be sure all material is wet
- Do not leave standing puddles

Note - For other bag sizes, use Table 2 to
determine water content.

APPLICATION
Method for Pouring a Slab
- Dampen the subgrade before concrete is
  placed
- Do not leave standing puddles
- Shovel or place concrete into the form; fill
to the full depth of the form
- After concrete has been compacted and
  spread to completely fill the forms without
  air pockets, strike off and float immediately
- To strike off, use a straight board (screed),
moving the edge back and forth with a
saw-like motion to smooth the surface
- Use a darby or bull float to float the sur-
fase; this levels any ridges and fills voids left
by the straight edge
- Cut the concrete away from the forms by
  running an edging tool or trowel along the
  forms to compact the slab edges
- Cut 1” (25.4 mm) deep control joints into the
  slab every 6’ - 8’ (1.8 - 2.4 m) using a grooving
  tool

QUICKRETE Concrete Sealer provides the easiest and most convenient method of curing. Apply by spray, brush or roller soon after the final finishing operation when the surface is hard. The surface may be damp, but not wet, when applying curing compound. Complete coverage is essential.

Other methods of providing proper curing include covering the surface with wet burlap; keeping the surface wet with a lawn sprinkler and sealing the concrete surface with plastic sheeting or waterproof paper to prevent moisture loss.

If burlap is used, it should be free of chemicals that could weaken or discolor the concrete. New burlap should be washed before use. Place it when the concrete is hard enough to withstand surface damage and sprinkle it periodically to keep the concrete surface continuously moist.

Water curing with lawn sprinklers, nozzles or soaking hoses must be continuous to prevent interruption of the curing process.

Curing with plastic sheets is convenient. They must be laid flat, thoroughly sealed at joints and anchored carefully along edges.

6. Availability
QUICKRETE Concrete Mix is available at leading concrete construction supply houses and distributors. Contact QUICKRETE Construction Products for the name of the nearest dealer.

7. Warranty
The QUICKRETE Companies warrant this product to be of merchantable quality when used or applied in accordance with the instructions herein. The product is not warranted as suitable for any purpose or use other than the general purpose for which it is intended. Liability under this warranty is limited to the replacement of its product (as purchased) found to be defective, or at the shipping companies’ option, to refund the purchase price. In the event of a claim under this warranty, notice must be given to The QUICKRETE Companies in writing. This limited warranty is issued and accepted in lieu of all other express warranties and expressly excludes liability for consequential damages.

8. Maintenance
None required.

9. Technical Services
The QUICKRETE Companies maintain technical field representatives throughout the country. Contact a local distributor for the name and number of the nearest representative or call QUICKRETE Construction Products.

10. Filing Systems
Additional product information is available from the manufacturer.
1. Product Name
QUIKRETE® Fast-Setting Concrete #1004-50

2. Manufacturer
The QUIKRETE Companies
One Securities Centre
3490 Piedmont Rd., NE Suite 1300
Atlanta, GA 30305
(404) 634-9100
Fax: (404) 842-1424
www.quikrete.com

3. Product Description
BASIC USE
QUIKRETE Fast-Setting Concrete is used for setting posts, sleeves and anchors, for pouring slabs 2" (51 mm) or thicker, and for other applications where a fast-setting general purpose concrete is desirable.

COMPOSITION & MATERIALS
QUIKRETE Fast-Setting Concrete consists of a uniformly blended mixture of stone or gravel, sand and special cements.

SIZE
• 50 lb (22.7 kg) bags

YIELD
• For posts - Two 50 lb (22.7 kg) bags will set a 4" (102 mm) diameter post in a 10" (254 mm) diameter hole 2' (0.6 m) deep
• For slabs - Approximately 0.375 cu ft (11 L) per 50 lb (22.7 kg) bag

4. Technical Data
APPLICABLE STANDARDS
ASTM International
• ASTM C39 Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens
• ASTM C191 Standard Test Method for Time of Setting of Hydraulic Cement by Vicat Needle
• ASTM C387 Standard Specification for Packaged, Dry, Combined Materials for Mortar and Concrete

PHYSICAL/CHEMICAL PROPERTIES
Fast-Setting Concrete meets or exceeds the compressive strength requirements of ASTM C387. When mixed to a 2" - 3" (51 - 75 mm) slump, QUIKRETE Fast-Setting Concrete will achieve the typical physical properties shown in Table 1.

5. Installation
FOR SETTING POSTS
1. Place post into hole and temporarily stand straight. The hole diameter should be 3 times the post diameter. The depth of the post hole should be one-half of the above ground post height.
2. Pour dry mix into the hole until it is approximately 3" - 4" (76 - 102 mm) from the top.
3. Pour water into the dry mix until the powder is saturated with water. Depending on soil conditions, this will require about 1 gallon (3.8 L) of water per 50 lb (22.7 kg) bag. For holes deeper than 2' 6" (0.8 m), place the material in lifts of 2' 6" (0.8 m) or less to allow water to soak all the way through.
4. Fill the remainder of the hole with soil dug from the hole. Sets in 20 - 40 minutes. Wait 4 hours before placing heavy objects.

FOR POURING SLABS
Mix only as much material as can be placed in 20 minutes.

MACHINE MIXING INSTRUCTIONS
QUIKRETE Fast-Setting Concrete can be mixed in a barrel-type concrete mixer or a mortar mixer.
• Add at least 3/4 cu ft (20 L) of mixer capacity for each 50 lb (22.7 kg) bag to be mixed at one time
• Add approximately 4 pt (19 L) of fresh water to the mixer for each bag to be mixed
• Turn on the mixer and begin adding concrete. If the material becomes too difficult to mix, add small amounts of water at a time

HAND MIXING INSTRUCTIONS
• Empty bags into a suitable mixing container
• Add approximately 4 pt (19 L) of clean water for each 50 lb (22.7 kg) bag
• Work the mix with a shovel, rake or hoe; add water as needed until a plastic-like consistency is achieved
• Do not add more than 5 pt (24 L) of water per 50 lb (22.7 kg) bag
• Be sure all material is uniformly mixed
• Do not leave standing puddles

TEMPERATURE OF WATER
Because of the rapid setting time, special precautions must be taken, as set times will fluctuate in extremely hot or cold weather. Use cold water or water mixed with ice cubes in severely hot weather. Use hot water when mixing in severely cold weather.

APPLICATION
• Shovel or place concrete into form. Fill to the full depth of the form. Start in a corner and do not drag or flow the concrete unnecessarily
• After the concrete has been spread to completely fill the forms, strike off and float immediately
• To strike off, simply use a straight board, moving the edge back and forth with a saw-like motion to smooth the surface. Then use a darby or bull float to float the surface. This helps level any ridges and fills voids left by the straight edge
• Allow the concrete to stiffen slightly, waiting until all water has evaporated from the surface before troweling or applying a broom finish

Curing is one of the most important steps in concrete construction. Proper curing increases the strength and durability of concrete. Proper water content and temperature are essential for good curing. In near freezing temperatures, the hydration process slows considerably. When weather is too hot, dry or windy, water is lost by evaporation from the concrete and hydration stops, resulting in finishing difficulties and cracks. The ideal circumstances for curing are ample moisture and moderate temperature and wind conditions.

Specific Methods
Because QUIKRETE Fast-Setting Concrete is often used a few hours after placement, initial curing is very important. The most convenient curing method is to cover the concrete with plastic.

6. Availability
QUIKRETE Fast-Setting Concrete is available at leading concrete construction supply houses and distributors. Contact QUIKRETE Construction Products for the name of the nearest dealer.

7. Warranty
The QUIKRETE Companies warrant this product to be of merchantable quality when used or applied in accordance with the instructions herein. Product Use: Portland cement-based, aggregated products for general construction

SECTION II - HAZARD IDENTIFICATION

Route(s) of Entry: Inhalation, Skin, Ingestion

Acute Exposure: Product becomes alkaline when exposed to moisture. Exposure can dry the skin, cause alkali burns and affect the mucous membranes. Dust can irritate the eyes and upper respiratory system. Toxic effects noted in animals include, for acute exposures, alveolar damage with pulmonary edema.

Chronic Exposure: Dust can cause inflammation of the lining tissue of the interior of the nose and inflammation of the cornea. Hypersensitive individuals may develop an allergic dermatitis.
Carcinogenicity: Since Portland cement and blended cements are manufactured from raw materials mined from the earth (limestone, marl, sand, shale, etc.) and process heat is provided by burning fossil fuels, trace, but detectable, amounts of naturally occurring, and possibly harmful, elements may be found during chemical analysis. Under ASTM standards, Portland cement may contain 0.75 % insoluble residue. A fraction of these residues may be free crystalline silica. Respirable crystalline silica (quartz) can cause silicosis, a fibrosis (scarring) of the lungs and possibly cancer. There is evidence that exposure to respirable silica or the disease silicosis is associated with an increased incidence of Scleroderma, tuberculosis and kidney disorders.

Carcinogenicity Listings:

NTP: Known carcinogen
OSHA: Not listed as a carcinogen
IARC Monographs: Group 1 Carcinogen
California Proposition 65: Known carcinogen

NTP: The National Toxicology Program, in its “Ninth Report on Carcinogens” (released May 15, 2000) concluded that “Respirable crystalline silica (RCS), primarily quartz dusts occurring in industrial and occupational settings, is known to be a human carcinogen, based on sufficient evidence of carcinogenicity from studies in humans indicating a causal relationship between exposure to RCS and increased lung cancer rates in workers exposed to crystalline silica dust (reviewed in IAC, 1997; Brown et al., 1997; Hind et al., 1997)

IARC: The International Agency for Research on Cancer (“IARC”) concluded that there was “sufficient evidence in humans for the carcinogenicity of crystalline silica in the forms of quartz or cristobalite from occupational sources”, and that there is “sufficient evidence in experimental animals for the carcinogenicity of quartz or cristobalite.” The overall IARC evaluation was that “crystalline silica inhaled in the form of quartz or cristobalite from occupational sources is carcinogenic to humans (Group 1).” The IARC evaluation noted that “carcinogenicity was not detected in all industrial circumstances or studies. Carcinogenicity may be dependent on inherent characteristics of the crystalline silica or on external factors affecting its biological activity or distribution of its polymorphs.” For further information on the IARC evaluation, see IARC Monographs on the Evaluation of carcinogenic Risks to Humans, Volume 68, “Silica, Some Silicates.” (1997)

Signs and Symptoms of Exposure: Symptoms of excessive exposure to the dust include shortness of breath and reduced pulmonary function. Excessive exposure to skin and eyes especially when mixed with water can cause caustic burns as severe as third degree.

Medical Conditions Generally Aggravated by Exposure: Individuals with sensitive skin and with pulmonary and/or respiratory disease, including, but not limited to, asthma and bronchitis, or subject to eye irritation, should be precluded from exposure. Exposure to crystalline silica or the disease silicosis is associated with increased incidence of scleroderma, Tuberculosis and possibly increased incidence of kidney lesions.

Chronic Exposure: Dust can cause inflammation of the lining tissue of the interior of the nose and inflammation of the cornea. Hypersensitive individuals may develop an allergic dermatitis. (May contain trace (<0.05 %) amounts of chromium salts or compounds including hexavalent chromium, or other metals found to be hazardous or toxic in some chemical forms. These metals are mostly present as trace substitutions within the principal minerals)

Medical Conditions Generally Aggravated by Exposure: Individuals with sensitive skin and with pulmonary and/or respiratory disease, including, but not limited to, asthma and bronchitis, or subject to eye irritation, should be precluded from exposure.

Other Limits: National Institute for Occupational Safety and Health (NIOSH). Recommended standard maximum permissible concentration=0.05 mg/M^3 (respirable free silica) as determined by a full-shift sample up to 10-hour working day, 40-hour work week. See NIOSH Criteria for a Recommended Standard Occupational Exposure to Crystalline Silica.

SECTION IV – First Aid Measures

**Eyes:** Immediately flush eye thoroughly with water. Continue flushing eye for at least 15 minutes, including under lids, to remove all particles. Call physician immediately.

**Skin:** Wash skin with cool water and pH-neutral soap or a mild detergent. Seek medical treatment if irritation or inflammation develops or persists. Seek immediate medical treatment in the event of burns.

**Inhalation:** Remove person to fresh air. If breathing is difficult, administer oxygen. If not breathing, give artificial respiration. Seek medical help if coughing and other symptoms do not subside. Inhalations of large amounts of Portland cement require immediate medical attention.

**Ingestion:** Do not induce vomiting. If conscious, have the victim drink plenty of water and call a physician immediately.

SECTION V - FIRE AND EXPLOSION HAZARD DATA

**Flammability:** Noncombustible and not explosive.

**Auto-ignition Temperature:** Not Applicable

**Flash Points:** Not Applicable

SECTION VI – ACCIDENTAL RELEASE MEASURES

If spilled, use dustless methods (vacuum) and place into covered container for disposal (if not contaminated or wet). Use adequate ventilation to keep exposure to airborne contaminants below the exposure limit.
SECTION VII - PRECAUTIONS FOR SAFE HANDLING AND STORAGE

Do not allow water to contact the product until time of use. DO NOT BREATHE DUST. In dusty environments, the use of an OSHA, MSHA or NIOSH approved respirator and tight fitting goggles is recommended.

SECTION VIII – EXPOSURE CONTROL MEASURES

Engineering Controls: Local exhaust can be used, if necessary, to control airborne dust levels.

Personal Protection: The use of barrier creams or impervious gloves, boots and clothing to protect the skin from contact is recommended. Following work, workers should shower with soap and water. Precautions must be observed because burns occur with little warning -- little heat is sensed.

WARN EMPLOYEES AND/OR CUSTOMERS OF THE HAZARDS AND REQUIRED OSHA PRECAUTIONS ASSOCIATED WITH THE USE OF THIS PRODUCT.

Exposure Limits: Consult local authorities for acceptable exposure limits

SECTION IX - PHYSICAL/CHEMICAL CHARACTERISTICS

Appearance: Gray to gray-brown colored powder; Some products contain coarse aggregates.
Specific Gravity: 2.6 to 3.15
Melting Point: >2700°F
Boiling Point: >2700°F
Vapor Pressure: Not Available
Vapor Density: Not Available
Evaporation Rate: Not Available
Solubility in Water: Slight
Odor: Not Available

SECTION X - REACTIVITY DATA

Stability: Stable.
Incompatibility (Materials to Avoid): Contact of silica with powerful oxidizing agents such as fluorine, chlorine trifluoride, manganese trioxide, or oxygen difluoride may cause fires
Hazardous Decomposition or By-products: Silica will dissolve in Hydrofluoric Acid and produce a corrosive gas – silicon tetrafluoride.
Hazardous Polymerization: Will Not Occur.
Condition to Avoid: Keep dry until used to preserve product utility.

SECTION XI – TOXICOLOGICAL INFORMATION

Routes of Entry: Inhalation, Ingestion
Toxicity to Animals:
   LD50: Not Available
   LC50: Not Available
Chronic Effects on Humans: Conditions aggravated by exposure include eye disease, skin disorders and Chronic Respiratory conditions.
Special Remarks on Toxicity: Not Available
SECTION XII – ECOLOGICAL INFORMATION

Ecotoxicity: Not Available
BOD5 and COD: Not Available
Products of Biodegradation: Not available
Toxicity of the Products of Biodegradation: Not available
Special Remarks on the Products of Biodegradation: Not available

SECTION XIII – DISPOSAL CONSIDERATIONS

Waste Disposal Method: The packaging and material may be land filled; however, material should be covered to minimize generation of airborne dust. This product is not classified as a hazardous waste under the authority of the RCRA (40CFR 261) or CERCLA (40CFR 117&302).

SECTION XIV – TRANSPORT INFORMATION

Not hazardous under U.S. DOT and TDG regulations.

SECTION XV – OTHER REGULATORY INFORMATION

US OSHA 29CFR 1910.1200: Considered hazardous under this regulation and should be included in the employers’ hazard communication program
SARA (Title III) Sections 311 & 312: Qualifies as a hazardous substance with delayed health effects
SARA (Title III) Section 313: Not subject to reporting requirements
TSCA (May 1997): Some substances are on the TSCA inventory list
Federal Hazardous Substances Act: Is a hazardous substance subject to statues promulgated under the subject act
Canadian Environmental Protection Act: Not listed
Canadian WHMIS Classification: Considered to be a hazardous material under the Hazardous Products Act as defined by the Controlled Products Regulations (Class D2A, E- Corrosive Material) and subject to the requirements of Health Canada’s Workplace Hazardous Material Information (WHMIS). This product has been classified according to the hazard criteria of the Controlled Products Regulation (CPR). This document complies with the WHMIS requirements of the Hazardous Products Act (HPA) and the CPR.
